

# How does extreme weather affect us?

## **As Geographers we will:**

Learn about the weather in the UK and look at places that have extreme weather. We will keep weather diaries and record the temperature where we are and compare with hotter and colder countries. We will use maps and globes to name and locate the world's continents and oceans. We will look at how weather in different places varies depending on their position from the equator.

## **As Scientists we will:**

Conduct experiments to answer questions about the weather. Look at seasonal change using our observation skills.

## **As Designers we will:**

Investigate, design and make our own musical instruments. We will use these to compose and play our own music inspired by weather.

## **As communicators we will:**

Learn how to write our own weather reports by speaking to a weatherman. We will present our reports by video recording and using green screen technology – just like they do on television!
